The

"LEAF-EATER".

CREATIVE ENGINEERING, INC.

Where ideas become inventions

USING THE LEAF-EATER AS A VACUUM:

1. Connect the Leaf-Eater to a standard garden hose.
2. Attach the handle bracket to a standard pole for pool accessories by slipping the bolt in the bracket through the last hole in the end of the pole. This allows the pole to pivot up and down.
3. Attach the collector bag by snapping it in place.
4. Turn the water on full force.
5. Sink the Leaf-Eater to the bottom of the pool and operate in a back and forth motion.
6. When the bag is full, remove the Leaf-Eater by guiding it up the side of the pool, lifting it up over the side, and resting it on the edge. Don't worry about losing the debris, it will stay in the bag as the bag flops over in the water upon removal.
7. Shut off the water, unsnap the bag, empty the bag, and turn it inside out for more complete cleaning.

USING THE LEAF-EATER AS A POWER SPRAY BRUSH:

1. The Leaf-Eater is capable of power spraying algae and dirt off the walls of the pool by simply removing the collector bag, and turning the water on full force, then:
2. Point the jets of water towards the walls of the pool and walk around the side and watch the algae and dirt strip off the walls quickly and easily, with one motion.

POSSIBLE PROBLEMS AND SOLUTIONS:

Problem: The Leaf-Eater has a tendency to float after immersion.
Solution: There is air trapped in the collector bag which must be squeezed out after the Leaf-Eater is completely submerged.

Problem: The Leaf-Eater collector bag doesn't trap all the material that the unit vacuums and passes some back through the bag.
Solution: The problem here really lies in the way the pool was maintained to date. HTH will pass through the collector bag as will dead chlorine powder. These particles must be removed by the conventional system for the first cleaning, and then kept out of the pool from then on, and the Leaf-Eater can do the complete vacuuming job from then on.

The bag supplied with the Leaf-Eater is the standard collector bag and has been designed to accommodate average debris collection. If, however, a finer mesh bag is required by the user, finer mesh bags are available from:
Creative Engineering, Inc. at an additional cost of $9.95 (plus $.40 sales tax for Fla. res.). It should be noted, however, that while this bag will collect even finer materials than the standard collector bag, it will not be as effective for larger debris because of the reduced velocity of water passing through the bags pores.

Orders for the finer collector bag or reorders for the standard collector bag when needed,(also $9.95 + tax), may be addressed to:

Creative Engineering Inc.

4521 West Concord Ave.
Orlando, Fla. 32808

GUARANTEE

The Leaf-Eater is the finest venturi vacuum available for the pool owner at any price. If, however, you do not fall in love with your Leaf-Eater, you may return it within two weeks to the point of purchase for a full refund.

If, within the first year of operation, your Leaf-Eater developes any problems as a result of manufacturing error or design flaw, it will be exchanged or repaired at no cost to you other than transportation to the point of purchase or postage to the factory.
